Information Security Officer-Hybrid-Den Bosch

Description

As a guardian of digital fortresses and a pioneer in cybersecurity processes at our client, you are at the helm as an Information Security Officer. You are the point of contact for security management and an advisor in the dynamic world of information security and IT security.

Responsibilities

- Bring guidelines and policies to the heart of our organization.
- Forge information security policies, monitor implementation and keep a finger on the pulse.
- Dive into security testing, manage Security Information and Event Management, and share findings.
- Identify, evaluate and manage information security risks.
- Advise management and stakeholders about risks and measures.
- Draw up requirements and set projects and suppliers on the right course.
- Assess the security of IT vendors, software and hardware.
- Monitor security findings and provide quick resolutions.
- Proactively following up on IT security findings from various studies.
- Encourage basic security within the IT organization and advise on specific fronts.
- Ensure a resilient response to security incidents.
- Keep the organization compliant with information security laws and regulations.

Qualifications

- A good dose of HBO working and thinking level.
- Knowledge of information security frameworks (NIST, COBIT, ISO 27000) and security testing.
- Experience with IT, business and process architectures (minimum 3-5 years).
- Certification in a security methodology (CISM, CISSP or similar).
- Knowledge of the basic advisor module.
