Java Developer

Description

Your role & work environment:

The Financial Markets Quants team, specialized in Derivative products, covering a wide range of asset classes (Interest Rates, Equities, FX, Commodities, Credit) supports businesses in Amsterdam, London, Brussels, Singapore (Asia hub) and New York.

In this context, we look for a JAVA DEVELOPER to develop, maintain and secure the Java code of our internally developed platform for Pricing and Risk Management.

Responsibilities

Your main responsibilities as a JAVA DEVELOPER are :

Develop

- New functionalities for Financial Markets Traders to integrate in the current Java Swing

client

- Real-time pricing functions to support Trading desks
- Implement pricing library functions (database, GUI, Web services, ...)

Maintain

- Maintain the key components of the Java code
- Enhance the testing process
- Provide L3 support to Trading and Sales

Secure

- Keep a proactive eye on new technologies, performance and security aspects

We look for a colleague with a talent for taking it on and making it happen, enthusiasm for helping others to be successful and a knack for always being a step ahead. In other words, you strive to bring fresh ideas to life and embrace challenges in a fast changing and complex environment. You are a naturally collaborative person who listens and invests in others to achieve common goals. You love to challenge the status quo and are eager to propose creative solutions to problems.

Qualifications

As a JAVA DEVELOPER you will also need:

- Bachelor degree with strong programming experience in Java
- Technical expertise in Java development, SQL server / Oracle, Java Swing
- Knowledge of Financial products
- Soft skills: Fast learner, Flexible, Team player, Stress resistant
