Test Engineer Arnhem

Description

We are seeking a skilled and detail-oriented Test Engineer to join our quality assurance team. As a Test Engineer, you will play a crucial role in ensuring the reliability, performance, and quality of our software products. You will be responsible for designing, implementing, and executing test plans, collaborating closely with cross-functional teams to identify and address software defects.

Responsibilities

Test Planning:
– Collaborate with product managers, developers, and other stakeholders to understand project requirements.
– Design comprehensive test plans and test cases based on functional and technical specifications.

2. **Test Execution:**
– Execute manual and automated test cases to identify software defects and ensure product quality.
– Conduct exploratory testing to uncover unexpected issues and scenarios.
– Perform regression testing to validate software functionality after code changes.

3. **Automation:**
– Develop and maintain automated test scripts for functional and regression testing.
– Implement and enhance test automation frameworks to improve efficiency and coverage.

4. **Defect Tracking:**
– Document and track defects through to resolution, ensuring proper communication to the development team.
– Collaborate with developers to reproduce and debug issues.

5. **Collaboration:**
– Work closely with developers, product managers, and other team members to understand the system architecture and functionality.
– Participate actively in Agile/Scrum ceremonies, providing input on product quality.

6. **Performance Testing:**
– Design and execute performance and load tests to identify bottlenecks and ensure system scalability.

7. **Continuous Improvement:**
– Provide feedback on product quality and suggest improvements to processes and tools.
– Stay current with industry trends and best practices in testing and quality assurance.
